CONTROLLED SUBSTANCES SEIZED IN CALIFORNIA, 1979

INTRODUCTION

This report was prepared by the Bureau of Criminal Statistics (BCS) to comply with the requirements of Section 11487 of the California Health and Safety Code. This section requires the Attorney General to issue an annual report to the Governor and Legislature of amounts, kind, and disposition of controlled substances seized. These data were reported to BCS from federal, state, and local law enforcement agencies for possession of a controlled substance pursuant to the provisions of that chapter.

Data on the disposition of seized substances are not included since reporting agencies did not specify any exceptions to the fact that all controlled substances were either being retained as evidence, in storage pending destruction, or destroyed according to a manner prescribed by law.

Several factors have, for a number of years, been thought to influence the type of amounts of controlled substances seized in a particular jurisdiction, county, or geographic area. Among these factors are:

- Proximity to an international border;
- Presence of major ports of entry (including international airports);
- Existence of remote areas that support manufacturing, smuggling, and cultivating activities;
- Relationship to large metropolitan areas; and
- Enforcement practices and policies and availability of resources.

This report, however, makes no attempt to evaluate or draw conclusions concerning the effects of these factors on the drug problem in California.

DATA LIMITATIONS

The controlled substance data included in this report are accurate and complete to the extent that contributing agencies met their reporting obligations. Known limitations which apply to the data are as follows:

Duplicate reporting — It is possible that duplicate reporting occurred when two or more agencies were involved in a seizure.

Unidentified substances — Substances reported only as "other pills" or "assorted pills and capsules" were omitted from this report due to the lack of determination of their composition. Those substances reported as "other hallucinogens," "other narcotics," or "other barbiturates" were included and combined in the tables under the heading "All Other (not reported by schedule)."

Weight determinations — For practical reasons, reporting agencies did not always weigh seized substances, nor did they always report the precise amounts of gram weights seized. In these cases, gram weights were determined by estimating or by using a conversion table supplied with the reporting form (shown in Appendix A). This conversion table was prepared using information supplied by the Bureau of Forensic Services of the California Department of Justice. Other controlled substances where weights would be inappropriate, such as LSD, or seizures that could not be determined from the conversion guide, were counted with dosage unit seizures. Also, large seizures of marijuana plants were sometimes combined and reported with marijuana gram weights instead of as plants. To eliminate this problem, the 1980 reporting form has been revised to provide a separate category for reporting weighed marijuana plants.

Absence of quantitative analyses — Quantitative analyses of seized substances were not routinely performed, generally due to workload and/or funding constraints. The resulting gram weight data must therefore be presumed, in most cases, to include those adulterants generally associated with particular controlled substances.

Reported number of seizures — Caution should be used when relating gram weights to numbers of seizures. Information was not always available at the agency level to correctly report the number of seizures.

DISCUSSION

The term "seizure," as used in this report, means taking possession of a controlled substance and includes acquiring materials through evidence seizures and buys, as well as taking custody of found or abandoned substances.

The determination of the types of controlled substances to be reported is based on the California Uniform Controlled Substance Act (Health and Safety Code Sections 11000 - 11651). The Act categorizes controlled substances into five schedules which group those substances with similar potentials for abuse, medical uses, and known dependency-producing abilities. The types of substances in each schedule are: Schedule I — marijuana (concentrated and unconcentrated), heroin, lysergic acid diethylamide (LSD), and designated opiates, opium derivatives, and hallucinogens; Schedule II — amphetamines, methamphetamines, cocaine, phencyclidine (PCP), and certain opiates, opium derivatives, and stimulants; Schedule III — barbiturates, methaqualone, and designated opium derivatives and depressants; Schedule IV — phenobarbital and certain depressants; and Schedule V — opium derivatives, such as cough syrup with codeine. The criteria for placing a substance in one of the five schedules are shown in Appendix B.

Table 1 represents a statewide summary of controlled substance seizures reported by all agencies during 1979. Table 2 includes a summary for each county of the seizures reported by local law enforcement agencies (police and sheriffs' departments and narcotic task forces) within that county, and Table 3 shows the data collected for individual California federal district offices and ports of entry by the Drug Enforcement Administration and the United States Customs Service.

STATEWIDE SUMMARY

The statewide data in Table 1 show a combined total of 98,082 controlled substance seizures reported in 1979 with federal agencies accounting for 5.1 percent of the total amount, state agencies 9.2 percent, and local law enforcement agencies 85.6 percent.

Table 1 also displays the amounts of controlled substances seized in California. Those reported by federal agencies accounted for 33.9 percent of the state total, local law enforcement agencies 63.9 percent, and state agencies 2.2 percent. Although a variety of state agencies have been involved in controlled substance seizures, the California Department of Justice has the only active statewide narcotic enforcement program. This program, administered by the Investigation and Enforcement Branch (IEB), provides assistance to federal and local law enforcement agencies in the apprehension of major and multijurisdictional violators. Many seizures resulting from combined efforts of IEB and local or federal agencies were reported by the local or federal agency involved.

Table 1 also shows that Schedule I substances, as a group, represented the highest volume of grams seized, primarily because marijuana (a substance easily identified and usually found in bulk) was seized more often and in greater amounts than any other controlled substance. Total reported grams of marijuana seized were 89,307,726 or 95.4 percent of the total 93,606,357 grams of all controlled substances seized in California.

COUNTY SUMMARY

As shown in Table 2, local law enforcement agencies in all California counties reported a combined total of 59,847,098 grams seized as well as 64,011 unweighed dosage units and 16,627 unweighed plants.

There were six counties in which local law enforcement agencies reported seized substances in amounts exceeding 2.0 million grams. These counties – Fresno, Humboldt, Los Angeles, Riverside, Sonoma, and Stanislaus – represent 39.2 percent of the state's population and reported 78.2 percent (46.8 million) of the total 59.8 million grams reported by all counties.

Los Angeles County, the most populous county, with 31.4 percent of the state's total population, accounted for 9.0 percent (5.4 million) of the total reported grams seized by local law enforcement agencies. Riverside County, with 2.8 percent of the state's population, accounted for 35.6 percent (21.3 million grams). The remaining four counties, Fresno, Humboldt, Sonoma, and Stanislaus, have remote areas that support marijuana cultivation activities. These counties, totaling five percent of the state's population, had a combined total of 33.6 percent (20.1 million) of the agencies' reported total grams seized. Humboldt County, the least populous of the four counties, accounted for 15.0 percent (8.9 million grams).

FEDERAL AGENCY SUMMARY

Data displayed in Table 3 are reported by the Drug Enforcement Administration (DEA) district offices and the U.S. Customs Service ports of entry in California. These data show that federal agencies reported a combined total of 5,031 seizures consisting of 31.7 million grams. Of these, 26.4 percent (8.4 million grams) were seized by the DEA, and 73.6 percent (23.3 million grams) by the Customs Service. In addition, federal agencies reported 4.9 million dosage units of unweighed seizures with lysergic acid diethylamide seized accounting for 98.8 percent of the total California seizures reported for that substance.

Federal agency seizures at border cities such as Andrade, Calexico, San Diego, San Ysidro, and Tecate accounted for 3,054 seizures or 60.7 percent of all seizures reported for California by all district offices and ports of entry. These amounted to 5.3 million grams, or 16.8 percent of the total grams seized by federal agencies.

The two agencies reported a combined total of 1,234 seizures amounting to 14.2 million grams of controlled substances seized in the Los Angeles area. These accounted for 44.8 percent of the total grams seized by federal agencies in California.

TABLE 1
CONTROLLED SUBSTANCES SEIZED IN CALIFORNIA BY FEDERAL, STATE, AND LOCAL AGENCIES, 1979

A. Number and Percent of Seizures and Grams

B. Number of Dosage Units and Marijuana Plants

Type of substance	Total		Federal agencies		State agencies		Local law enforcement agencies	
	Dosage units	Plants	Dosage units	Plants	Dosage units	Plants	Dosage units	Plants
Total	5,013,901	17,040	4,948,462	0	1,428	413	64,011	16,627
Marijuana		13,558				413		13,145
Lysergic acid diethylamide	5,003,874		4,943,687		548		59,639	
Phencyclidine	619						619	
All other (Schedule II)		3,482						3,482
All other (not reported by schedule)	9,408		4,775		880		3,753	

Notes: Amounts of seized substances were reported as either the number of grams, the number of dosage units, or the number of plants. Although the table displays numbers of dosage units and plants separately from gram weight totals, the related seizures, regardless of the method of reporting the amount seized, were summarized in Section A.
Percents may not add to 100.0 because of rounding.

[a]Substances were reported in only one of the following ways: number of grams, number of dosage units, or number of plants.
[b]In 1979, the Los Angeles Police Department seized 2,050,512.3 grams and 765 dosage units of controlled substances. However, the total number of seizures is not available.

APPENDIX A

APPENDIX A

COMMON WEIGHTS OF STREET QUANTITY DRUGS
(Gross Weights Including Adulterants)

The following table may be used to convert dosage units to gram weights where it would be impractical to actually weigh the seized material. It must be recognized that the weights shown represent an average. The true weights of materials seized may show a wide variance from these averages. For that reason it is preferable that the agency responsible for a seizure weigh the substance rather than compute its weight by multiplying the number of units by an arbitrary weight per unit. Gross weight, including the weight of any adulterants (but not the weight of the container such as paper, balloon, etc.), is called for rather than net weight. It would be impossible to determine the true net weight of many substances without actually subjecting them to laboratory analysis. The following list is not intended to be all inclusive. It can be used as a guide in computing the weights of other controlled substances not specifically listed.

Controlled Substance	Weight in Grams
Phenobarbital tablet	.40
Sodium secobarbital capsule	.25
Amphetamine – Minibennie	.07
Large crosstop	.33
Cocaine – Street gram or spoon	.75
Heroin – ½ spoon	.45
1 spoon	.75
1 ounce piece	20.00
Bindle, hit, or fix	.15
Codeine – All pharmaceutical mixtures	.30
Marijuana – Thai stick	5.00
Cigarette	.35
Lid, ounce, or baggie	20.00
Brick	800.00

One kilo = 1000 grams
One ounce = 28.35 grams
One pound = 453.60 grams
One cc liquid = 1 gram

State of California/Department of Justice/Division of Law Enforcement

REPORT OF CONTROLLED SUBSTANCE SEIZURES BY CALIFORNIA LAW ENFORCEMENT AGENCIES

Reporting Agency _____

Reporting Period: ☐ January through June, 19 ____ ☐ July through December, 19 ____

Report the total amounts of all controlled substances, listed in the Uniform Controlled Substances Act, Sections 11054 - 11058 of the Health and Safety Code, that your agency has seized during the reporting period; this is not an inventory of drugs in custody. It is important for the accuracy of this report that seizure information not be duplicated. Do not include drugs which will be reported by another agency. Report seizures made during the reporting period only. Report all weights in grams and tenths of a gram. A guide is attached for converting dosage units to grams if needed.

SEE REVERSE SIDE FOR INSTRUCTIONS

	SCHEDULE I	No. Seizures	Grams
190	Marijuana		.
160	Heroin		.
189	Lysergic Acid Diethylamide		.
192	All Other Schedule I		.

Code	SCHEDULE II		Grams
281	Amphetamine/Methamphetamine		.
240	Cocaine		.
290	Phencyclidine		.
201	All Other Schedule II		

Other SEIZURES where weights are unavailable. Use only one line for each type of drug reported. Use specific names as designated in the Uniform Controlled Substances Act. (Do not duplicate from above)

Code	CONTROLLED SUBSTANCE	No. Seizures	Dosage Units

Code	SCHEDULE III	No. Seizures	Grams
301	Barbiturates		.
306	Methaqualone		.
302	All Other Schedule III		.

Code	SCHEDULE IV	No. Seizures	Grams
411	Phenobarbitol		.
401	All Other Schedule IV		.

Code	SCHEDULE V	No. Seizures	Grams
501	All Other (not reported by schedule)		.

During the period specified above, this agency was responsible for the seizure of the above controlled substances listed in Section 11054, 11055, 11056, 11057, and 11058 of the California Health and Safety Code.

Unless otherwise specified below, all the controlled substances are being retained as evidence, are in storage pending destruction, or have been destroyed according to a manner prescribed by law.

Mail Completed Forms To:

Bureau of Criminal Statistics
P. O. Box 13427
Sacramento, CA 95813

19

JUS 7040 (Rev. 8/79)

GENERAL INSTRUCTIONS

This reporting form must be completed and forwarded to the Bureau of Criminal Statistics (BCS) in compliance with Section 11487 of the Health and Safety Code which requires that "each city, county, or state agency coming into possession of a controlled substance pursuant to the provisions of this chapter shall report semiannually to the Attorney General the amounts, kind, and disposition of controlled substances so seized."

For purposes of this report, only law enforcement agencies directly involved in the seizure of controlled substances are required to report. All substances turned over to a laboratory for analysis will be reported by the law enforcement agency which sent the material to the laboratory. In the same manner, substances held as evidence by county clerks or court clerks will be reported by the law enforcement agency responsible for the seizure.

It is not necessary that all seizures be subjected to laboratory analysis for determination of drug content or weight. Determinations based on officers' experience or field tests are adequate. The weights of seized material need not be precise. The conversion table attached should be used to convert dosage units to a gram weight when the substance seized *has not* actually been weighed.

In those instances where two or more agencies are involved in a particular seizure it is essential that it be reported by only one of the agencies to prevent duplication. Unless there are other commitments, the agency having responsibility for storage of the seized material should be the one to report.

In no instance should any report reflect amounts of controlled substances seized prior to, or following, the six-month reporting period. If no substances are seized during a six-month period, please submit a negative report by recording "none" diagonally across the form.

SPECIAL INSTRUCTIONS

Reporting Agency – Type, or print clearly, the agency name.

Reporting Period – Check the box that indicates for which half-year the seizure data are being reported and type, or print clearly, the last two digits of the year.

Code – Do not use this space; this space is for BCS use only.

Schedule – To identify names of controlled substances to be included in the "All Other" category or those to be listed in the "Other Seizures" section, refer to the Uniform Controlled Substances Act, Section 11054–11058 of the Health and Safety Code. Type, or print clearly, the specific name of the controlled substance under the appropriate schedule number.

Number of Seizures – Show the number of seizures made for each specific drug. When two or more types of drugs are seized at one time, count one seizure for each drug.

Weights – Type, or print clearly, the amounts in grams and tenths of a gram for each drug listed for which there were seizures. When converting from ounces or pounds to grams, use 28.35 grams to the ounce or 453.60 grams to the pound. Enter gross weights including weight of the adulterant if any. Do not include the weight of the container (can, box, bottle, paper, etc.). The amount shown should reflect an accumulated (summary) total for the entire six-month period for each specific controlled substance seized. If the total quantity of a specific substance seized during the entire six-month period is less than one-tenth of a gram it should not be reported.

Dosage Units – Show the number of dosage units seized for substances such as LSD where weights would be inappropriate or if weights cannot be determined from the weight conversion guide.

Exceptions – If, after completing the sections above, you determine that a controlled substance is not being retained as evidence; is not in storage pending destruction; or has not been destroyed in a manner prescribed by law; this must be noted in the "Exceptions" section of the form. Type, or print clearly, the specific name of the substance, the amount, and the disposition.

APPENDIX B

APPENDIX B

Criteria for Classifying Controlled Substances

The California Uniform Controlled Substances Act is based upon the Federal Controlled Substances Act, which sets forth the following criteria for establishing the placement of a particular substance in any one of the five schedules:

Schedule I

- The substance has a high potential for abuse.
- The substance has no currently accepted medical use in treatment in the United States.
- There is a lack of accepted safety for use of the drug or other substance under medical supervision.

Schedule II

- The substance has a high potential for abuse.
- The substance has a currently accepted medical use in treatment in the United States or a currently accepted medical use with severe restrictions.
- Abuse of the substance may lead to severe psychological or physical dependence.

Schedule III

- The substance has a potential for abuse less than the substances in Schedules I and II.
- The substance has a currently accepted medical use in treatment in the United States.
- Abuse of the substance may lead to moderate or low physical dependence or high psychological dependence.

Schedule IV

- The substance has a low potential for abuse relative to the substances in Schedule III.
- The substance has a currently accepted medical use in treatment in the United States.

- Abuse of the substance may lead to limited physical dependence or psychological dependence relative to the substances in Schedule III.

Schedule V

- The substance has a low potential for abuse relative to the substances in Schedule IV.
- The substance has a currently accepted medical use in treatment in the United States.
- Abuse of the substance may lead to limited physical dependence or psychological dependence relative to the substances in Schedule IV.

The eight specific factors shown below are considered prior to placing a controlled substance in a particular schedule:

1. Its actual or relative potential for abuse;
2. Scientific evidence of its pharmacological effect, if known;
3. The state of current scientific knowledge regarding the drug or other substance;
4. Its history and current pattern of abuse;
5. The scope, duration, and significance of abuse;
6. What, if any, risk there is to the public health;
7. Its physical or psychological dependence ability; and
8. Whether the substance is an immediate precursor of a substance already controlled.
